

Migrating to VoIP

Choosing a provider that can smoothly migrate your business from traditional phone service (POTS) to VoIP involves more than just technology. Site analysis, on-site technicians, project management, and the ability to diagnose and troubleshoot network and broadband issues — these components can make or break a project.

The BullsEye Way

Since 2004, BullsEye Telecom has helped companies across the U.S. make the move to VoIP. BullsEye's proven process takes the worry out of any migration:

THE COMPLETE VOIP PORTFOLIO:

- ✓ Hosted PBX
- ✓ Hosted BYOD – use phones you already own
- ✓ POTS over Broadband
- ✓ IP PRI
- ✓ SIP Trunk
- ✓ UCaaS

RELATED PRODUCTS & SERVICES:

- SD-WAN
- Site Surveys
- VoIP Assurance
- Wiring Services
- My BullsEye Account Portal
- Managed Network Solutions
- Cellular Failover/Wireless Backup
- Broadband (Cable, T1, Fiber, Satellite, Cellular, DSL, and EoC)

The BullsEye Difference

A few clear differences deliver unmatched value to our customers:

Controlled on-net POTS to VoIP migration

One provider to call — forget dealing with multiple vendors

Physical and geo-redundant network for guaranteed uptime and security

Partnerships with industry leaders including Polycom, BroadSoft, VeloCloud, and Obihai

Challenge	BullsEye Solution
 Quantifying cost savings	We can diagnose and improve network issues remotely to optimize your VoIP experience.
 Assessing VoIP readiness at individual sites	We simulate and test the number of calls you need prior to installation. We test your LAN, internet, firewall, and modem settings for optimal voice quality.
 Limited IT resources for managing multiple providers	As a POTS, broadband, SD-WAN, and VoIP provider, we can manage the entire process to eliminate finger pointing!
 Multiple vendors make invoice management difficult and time-consuming	You'll benefit from a single, consolidated invoice for all of your services, customized to your specifications.
 Fax, alarm, or emergency lines	We offer several cloud faxing options, or BullsEye can continue to provide analog lines for these services.
 MPLS integration	VoIP and network specialists provide guidance regarding long-term solutions or how to integrate with your existing network.
